## Build Agent

### Add Appointment Status Workflow

Create a Deluge workflow for my Patient Management System. When a new appointment is submitted successfully, check that the appointment date is valid and update the appointment status to "Scheduled". If the appointment date is in the past, display a suitable validation message. Use the existing form and field names in my application. Do not modify unrelated patient records.

Add Appointment Status Workflow >

A new workflow has been created for the Appointment_Booking_Form. When a new appointment is submitted successfully, the workflow now updates the appointment status to "Scheduled".
