

Ex.No-1

Date:

Comparative study of low-code development versus traditional application development approaches

AIM:

To make a comparative study of low-code development versus traditional application development approaches.

Features:

Features	Traditional App Development	Low-Code Development
Definition	Applications are built by writing code manually.	App are built using visual drag-and-drop tools with minimum coding.
Coding Required	High	Low.
Development Speed	Slower	Much faster
Skill requirement	Professional programming skills	Basic programming knowledge is enough.
Customization	Very high	Limited compared to traditional development

Cost	Higher	Lower
Maintenance	More complex	Easier
Scalability	Excellent	Good, but depends on the platform.
Best For	Large, complex and custom app	Business apps, workflows, Prototypes and internal tools.

Advantages and Disadvantages:

Traditional development:

Advantages:

- * Full flexibility and customization.
- * High performance
- * Better security control.
- * Can build any type of application.

Disadvantages:

- * Takes more time to develop.
- * Higher development cost.
- * Longer testing and maintenance.

Advantages and Disadvantages of Low-code:

- * Rapid application development.
- * Lower cost.
- * Easy to learn.

- * Faster testing and deployment.

Disadvantages:

- * Limited Customization
- * Vendor lock-in
- * Not ideal for high complex apps.
- * Licensing costs for some platform.

Low-code Development:

- * Limited Customization option
- * Vendor dependency
- * Licensing cost for enterprise platform.

Result:

Thus, the comparison of traditional and Low code development has been completed successfully.
